## Information about bones

- Always ensure your dog or cat is fed on a 100% raw diet at least 3-4 weeks before introducing whole bones
- Never cut or saw bones
- Never feed bones with small children present
- Never leave a dog or cat unattended with a bone, chew or chunk
- Never feed cooked bones
- Always separate multi-dog house holds before feeding to prevent fights (raw meaty bones have a very high resource value and even the very best of friend dogs may fight)
- Always feed bones appropriate to the dog's age, size, breed and experience
- Do not feed bones from the butcher as their storage history is unknown and bacteria may be prevalent
- If storing in between chewing sessions, rinse the bone under cold water and store in a plastic bag or container in the fridge
- Always dispose of any uneaten material after 24 hours post defrost
- As an owner, it is your responsibility to ensure safe practice when feeding meaty bones, chunks or chews
